

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus that could allow the person driving to be able to control the forklift without leaving the seat. They are made out of top quality materials and are designed to be able to endure the most challenging operations and work surroundings. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more exact carrying and placement in a quicker and much more efficient method.

The unique fork pocket design enables operators to securely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the operator the alternative to either perform simultaneous or independent blade movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into blade positioners on available units.
